七、焊接指导 Welding guidance

1、使用烙铁人手焊接

Hand soldering with a soldering iron

推荐使用功率低于 20W 的烙铁，焊接时烙铁的温度必须保持在 350℃ 以下，且每个电极只能进行一次焊接，每次焊接的持续时间不得超过 3 秒

人手焊接过程中的不慎操作易引起 LED 产品的损坏，应当小心谨慎。

It is recommended to use a soldering iron with a power of less than 20W. During soldering, the temperature of the soldering iron must be kept below 350 °C, and each electrode can only enter Perform welding once, and the duration of each welding should not exceed 3 seconds
Careless operation during manual welding can easily cause damage to LED products, and caution should be taken.

2、回流焊接：推荐使用以下无铅回流焊接温度图进行。

Reflow soldering: It is recommended to use the following lead-free reflow soldering temperature chart

回流焊接最多只能进行两次。

Reflow soldering can only be performed twice at most.

在回流焊接升温过程中，请不要对 LED 施加任何压力。

Please do not apply any pressure to the LED during the reflow soldering heating process.

在焊接完成后，待产品温度下降到室温之后，再进行其他处理。

After welding is completed, wait for the product temperature to drop to room temperature before proceeding with other treatments.

八、使用注意事项 Precautions for use

1、清洗 clean

a. 不能用超声波清洗。建议使用异丙醇 (isopropyl alcohol)、纯酒精擦拭或浸渍，不要超过 1 分钟，在室温下放置 15 分钟再使用。清洗后，确保 LED 发光面干净，异物会影响发光颜色。

Ultrasonic cleaning is not allowed. It is recommended to wipe or soak with isopropyl alcohol or pure alcohol for no more than 1 minute, and let it sit at room temperature for 15 minutes before use. After cleaning, ensure that the LED emitting surface is clean, as foreign objects can affect the color of the light

b. 应避免接触或污染天那水，三氯乙烯、丙酮、硫化物、氮化物、酸、碱、盐类，这些物质会损伤 LED.

Avoid contact with or contamination of Tian Na water, trichloroethylene, acetone, sulfides, nitrides, acids, bases, and salts, as these substances can damage LEDs

2、灌封 Potting

a. 纳离子、硫化物会使荧光颜色变淡（中毒），灌封时，避免使用含纳离子、硫化物的灌封胶。

Nano ions and sulfides can cause the fluorescent color of Lou to become lighter (toxic). When sealing, avoid using sealing adhesives containing nano ions and sulfides

b. 使用正常灌封胶时，建议先以少量试验，常温点亮 168 小时，确定没有问题再作业。

When using normal sealant, it is recommended to conduct a small test first, light it up at room temperature for 168 hours, and confirm that there are no problems before starting work

3、保存 save

a. 打开包装前，LED 应存储在温度 30℃或以下，相对湿度在 RH60%以下，一年内使用。

Before opening the packaging, the LED should be stored at a temperature of 30 °C or below and a relative humidity of RH60% or below, and used within one year

b. 打开包装后，LED 应在温度 30℃或以下、相对湿度在 RH30-35%或更低环境下，使用时间 7 天。LED 吸潮后，回流焊时可能裂胶，影响发光颜色。对于未使用的散件，请去潮处理（对于卷装品：烘烤 60℃±5℃，12 小时；对于散装品：烘烤 105℃±5℃，1 小时），然后再用铝箔袋密封后保存。

After opening the packaging, the LED should be used for 7 days in an environment with a temperature of 30°C or below and a relative humidity of RH30-35% or lower. After the LED absorbs moisture, it may crack during reflow soldering, affecting the color of the light emission. For unused loose parts, please remove moisture (for roll products: bake at 60°C±5°C for 12 hours; for bulk products: bake at 105°C±5°C for 1 hour), then seal with aluminum foil bag and store

c. 保存环境中避免有酸、碱以及腐蚀气体存在，同时避免强烈震动及强磁场作用。

Avoid the presence of acids, alkalis, and corrosive gases in the storage environment, while also avoiding strong vibrations and strong magnetic fields

4、静电 static electricity

a. 静电或峰值浪涌电压会损坏 LED, 避免在开灯、关灯时产生瞬时电压。

Static electricity or peak surge voltage can damage LEDs, avoiding the generation of instantaneous voltage when turning on or off lights

b. 建议使用 LED 时佩戴防静电手腕带、防静电手套, 穿防静电鞋, 使用的设备、仪器正确接地。LED 损坏后, 表现出漏电流明显增加, 低电流正向电压变低, 低电流点不亮等现象。

It is recommended to wear anti-static wrist straps, anti-static gloves, anti-static shoes when using LEDs, and ensure that the equipment and instruments used are properly grounded. After the LED is damaged, it shows a significant increase in leakage current, a decrease in forward voltage at low current, and the low current point does not light up

5、测试 test

a. LED 要在额定电流下驱动, 同时电路中需要加限流电阻保护, 否则, 轻微的电压变化就会引起较大的电流变化, 从而破坏 LED.

LEDs need to be driven at rated current, and current limiting resistors need to be added to the circuit for protection. Otherwise, slight voltage changes can cause significant current changes, which can damage the LED

b. 在电路导通或关闭情况下, 要避免瞬间浪涌电压的产生, 否则, LED 将被烧坏。

When the circuit is turned on or off, it is necessary to avoid the generation of transient surge voltage, otherwise the LED will be burned out.

c. 顺向电压 V_F 过高或反向电压 V_R 过高, 均会损坏 LED.

Excessive forward voltage V_F or excessive reverse voltage V_R can damage the LED

d. 点亮或测试 LED 时, 加在 LED 两端的反向电压不得高于 5V, 否则容易击伤 LED.

When lighting or testing the LED, the reverse voltage applied to both ends of the LED should not exceed 5V, otherwise it is easy to damage the LED

6、其他 other

LED 发光颜色会随着工作电流不同而有少许变化，建议设计时考虑电阻与 LED 串联使用。点亮时，注意不要直视 LED 发光面，LED 的光强度会灼伤眼睛。

The color of LED light may vary slightly with different operating currents. It is recommended to consider using resistors in series with the LED during design. When lighting up, be careful not to look directly at the LED emitting surface, as the light intensity of the LED can burn the eyes
